

**iShield®**

PROTECTING YOUR FAMILY ONLINE

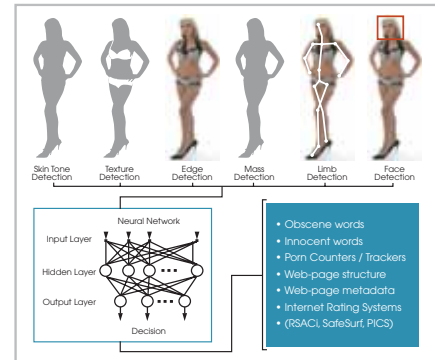

ENSURING THE RESPONSIBLE USE OF I.T.

iShield® is a unique software solution that enables you to protect your family from Internet based pornography and to manage their Internet usage.

## HOW iShield® WORKS

iShield®'s award-winning digital image and text processing engine analyzes both images and text within web pages to make an intelligent decision as to the nature of the content presented.

## FEATURES

### CUSTOMIZABLE PROTECTION MODE

You can set the action that takes place should potentially explicit image(s) be detected. iShield® can be set to just record violations (passive mode), give a warning (warn mode), block inappropriate images displayed on web page (block mode), block the entire web page (block redirect mode) or allow access only to websites listed on the white list.

### INTERNET USAGE

iShield® enables you to control user's access to the Internet. You can also choose to block non-supported browsers and applications preventing your children from by-passing iShield®.

### INCIDENT REPORTS

iShield® Incident Report captures the date, time and URL address of web pages in which potential pornographic image(s) were detected. iShield® sends an email whenever such an incidence occurs, allowing you to monitor your PC when you are away from home.

### DEFINABLE BLACK / WHITE LIST

iShield® allows you to maintain your own black / white lists which provide an additional level of customization of your family's Internet usage.

### DETERRENT TO SURFING PORNOGRAPHY

The iShield® icon in the system tray acts as a deterrent for children and adults to stay away from the temptations that may lie beyond the next mouse click.

### CUSTOMIZABLE USER PROFILES

The iShield® Control Panel provides a number of predefined, but fully customizable, user profiles (adult, teen or child) with different settings.

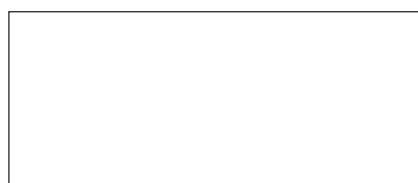

### SECURITY

The iShield® Control Panel is password protected to prevent unauthorized access to the settings.
